

VEERESH PATTAR

Java Backend Developer

Bengaluru | veereshpattar5027@gmail.com | 6360493599 | GitHub: <https://github.com/Veeresh5027>

PROFILE SUMMARY

Java Backend Developer with nearly 3 years of experience building production-grade enterprise and SaaS products using **Spring Boot**, **RESTful APIs**, and **Microservices**. Delivered robust **backend** systems with **MySQL**, **Hibernate/JPA**, and **Spring Security**, owning features end-to-end from **API** design to frontend integration. Thrives in **Agile** teams and passionate about building clean, **scalable**, and intelligent applications.

PROFESSIONAL WORK EXPERIENCE

Java Developer | Lifeline Systech Solutions (Whizible)

Mar 2024 – Present

Project: Whizible – Enterprise Project Management System

Tech Stack: Java 17, Spring Boot, Hibernate JPA, MySQL, REST APIs, Microservices, Angular, GitLab

Team Size: 6 | **Tools:** IntelliJ IDEA, VS Code, MySQL Workbench, Swagger UI, Postman

Description: Enterprise Project & Portfolio Management (PPM) platform used by organizations to manage project planning, sprint execution, resource allocation, task management, defect tracking, timesheets, billing, and real-time reporting through role-based dashboards.

Key Contributions and Impact

- Engineered scalable **RESTful APIs** using **Spring Boot**, implementing a layered **Controller-Service-Repository** architecture with **Spring Validation** to reduce defect resolution time.
- Owned the **Project Management microservice**, delivering core business modules including **User Story**, **Task**, and **Defect** tracking end-to-end.
- Optimized **Hibernate JPA** and **MySQL** performance for high-volume project scheduling, using **ModelMapper** to streamline **DTO-entity** conversion and reduce boilerplate code.
- Implemented **JWT-based authentication** and **Role-Based Access Control (RBAC)** using **Spring Security** to protect sensitive enterprise project data.
- Boosted code coverage from **60% to 85%** using **JUnit**, **Mockito**, and **JaCoCo**, while enforcing coding standards through **SonarQube** static analysis.
- Standardized API observability by designing a centralized **Global Exception Handling** framework and documenting endpoints using **Swagger UI** and **Postman**.
- Applied **Java 8** features including **Streams**, **Lambda Expressions**, and **Optional** to simplify business logic and improve code readability.
- Introduced centralized logging with **SLF4J/Logback** to enhance performance monitoring and observability across application layers.
- Developed high-impact features including automated **email notifications**, **Excel data import/export**, and **Angular Forms** for real-time project dashboards.
- Built reusable **Angular** UI components and integrated backend APIs to support responsive, real-time project management dashboards.
- Managed source code using **GitLab** with feature-branch workflows, collaborating through code reviews and version control best practices.
- Analyzed, **debugged**, and resolved production issues, collaborating with QA to ship fixes without destabilizing ongoing sprint work.
- Collaborated in a **6-member Agile Scrum** team, driving sprint success through active participation in planning, estimations, stand-ups, and retrospectives with QA Engineers and Business Analysts.

Project: SimplifyQA – SaaS Test Automation & Management Platform

Tech Stack: Java 11, Spring Boot, Hibernate JPA, MySQL, Angular, TypeScript, Bitbucket

Description: SaaS-based web-automation and test-management platform for teams adopting Agile and CI/CD practices, enabling creation and execution of automated test suites through a low-code interface integrated with build pipelines.

Key Contributions and Impact

- Designed **RESTful APIs** with **Spring Validation**, structured exception handling, and modular design principles to ensure reliable frontend-backend synchronization.
- Developed **Spring Boot** microservices focused on scalability and distributed systems architecture, supporting automated test execution and result aggregation.
- Implemented business logic for test execution workflows, ensuring accurate processing, **validation**, and seamless integration between **backend** services and the **Angular** frontend.
- Participated in feature development, bug fixing, and production support by analysing issues, implementing fixes, and validating solutions to improve overall application stability.
- Contributed to inter-service communication using **OpenFeign** and configured **API Gateway** for centralized request routing across microservices.
- Worked with **MySQL**, **Hibernate/JPA**, and **JDBC** to implement CRUD operations and support efficient data persistence for test management modules.
- Built reusable **Angular** components and implemented forms to streamline test case creation, execution, and result-tracking workflows.
- Diagnosed, **debugged**, and resolved cross-module integration issues between Angular UI and backend services, stabilizing sprint releases.
- Wrote unit test cases using **JUnit** for backend logic and participated in peer code reviews to maintain code quality.
- Supported refactoring of legacy code for improved performance and maintainability, following **REST API** best practices and frontend state management standards.
- Managed source code using **Git** and **Bitbucket** with feature-branch workflows, collaborating through version control and code review practices.
- Collaborated in **Agile Scrum** sprints using **JIRA**, participating in planning, task estimation, daily stand-ups, and retrospectives with developers and QA engineers.

TECHNICAL SKILLS

- **Languages & Core:** Java 8/11/17(Functional Interfaces, Optional, Streams, Lambda)/J2EE, OOPs Principles, Collections framework, Multithreading, Data Structures & Algorithms (DSA), SQL, TypeScript.
- **Frameworks:** Spring Boot, Spring MVC and Batch, Security (JWT & OAuth), Hibernate JPA, Angular.
- **Architecture:** RESTful APIs, Monolith and Microservices, Spring Cloud, Agile Methodology.
- **Databases & Messaging:** MySQL, Oracle, Redis (Caching), Apache Kafka, JSON.
- **Quality and Observability:** JUnit, Mockito, SonarQube, JaCoCo, ELK stack, Log4j, Postman, Swagger UI.
- **DevOps & Cloud:** Git / GitHub, Maven, Docker & Kubernetes (Basics), AWS (EC2, S3, RDS), Linux.
- **Tools & IDEs:** IntelliJ IDEA, VS Code, MySQL Workbench, JIRA, GitLab, Bitbucket, Chrome DevTools.

EDUCATION

Bachelor of Engineering (B.E.)

Visvesvaraya Technological University (VTU), Belagavi, Karnataka | CGPA: 8.01
